- RAL colour finishes available

RAZOR

- Edge-lit LED illumination
- Ultra slim modern design
- Even light distribution
- Easy open snap frame to change poster
- Low energy consumption
- CE certified
- Single or double sided
- RAL colour finishes available

The Razor LED light box is the ultimate ultra slim light box for illuminated promotional display graphics, with all-round superiority over any comparable products, particularly in relation to its higher brightness, more even light distribution and better build quality.

At only 26mm deep single sided (39mm deep double sided), Razor LED light boxes are so slim line they are essentially illuminated poster frames. They can be produced this thin because they use a strip of high bright LED lights to illuminate a sheet of pure clear acrylic from the sides. The LED lights emit such a high bright light that it gives the Razor light box the brightest and most even illumination available from any edge-lit light box.

Razor light boxes have a 32mm aluminium snap frame on the front for quick and easy front loading graphic change. There are three snap frame options: the Razor light box classic frame is semi-curved; the Razor Pro light box has a contemporary looking flat frame and the Razor Tamper Proof light box has a curved frame and comes with an opening tool for security. The aluminium snap frames come in silver anodised finish as standard or can be powder coated to a choice of RAL colours.

Razor LED light boxes are manufactured to the highest quality within Europe (CE certified) using top grade aluminium, pure acrylic and branded electrical components; including long life, high brightness, energy efficient LEDs.

Razor light boxes are available in standard poster sizes or they can be custom made to any specific sizes up to the billboard poster size of 6 sheet (1800 x 1200mm)
